Sensitivity to the neighbour definition

Delta AICc is computed separately within each outcome, specification and k

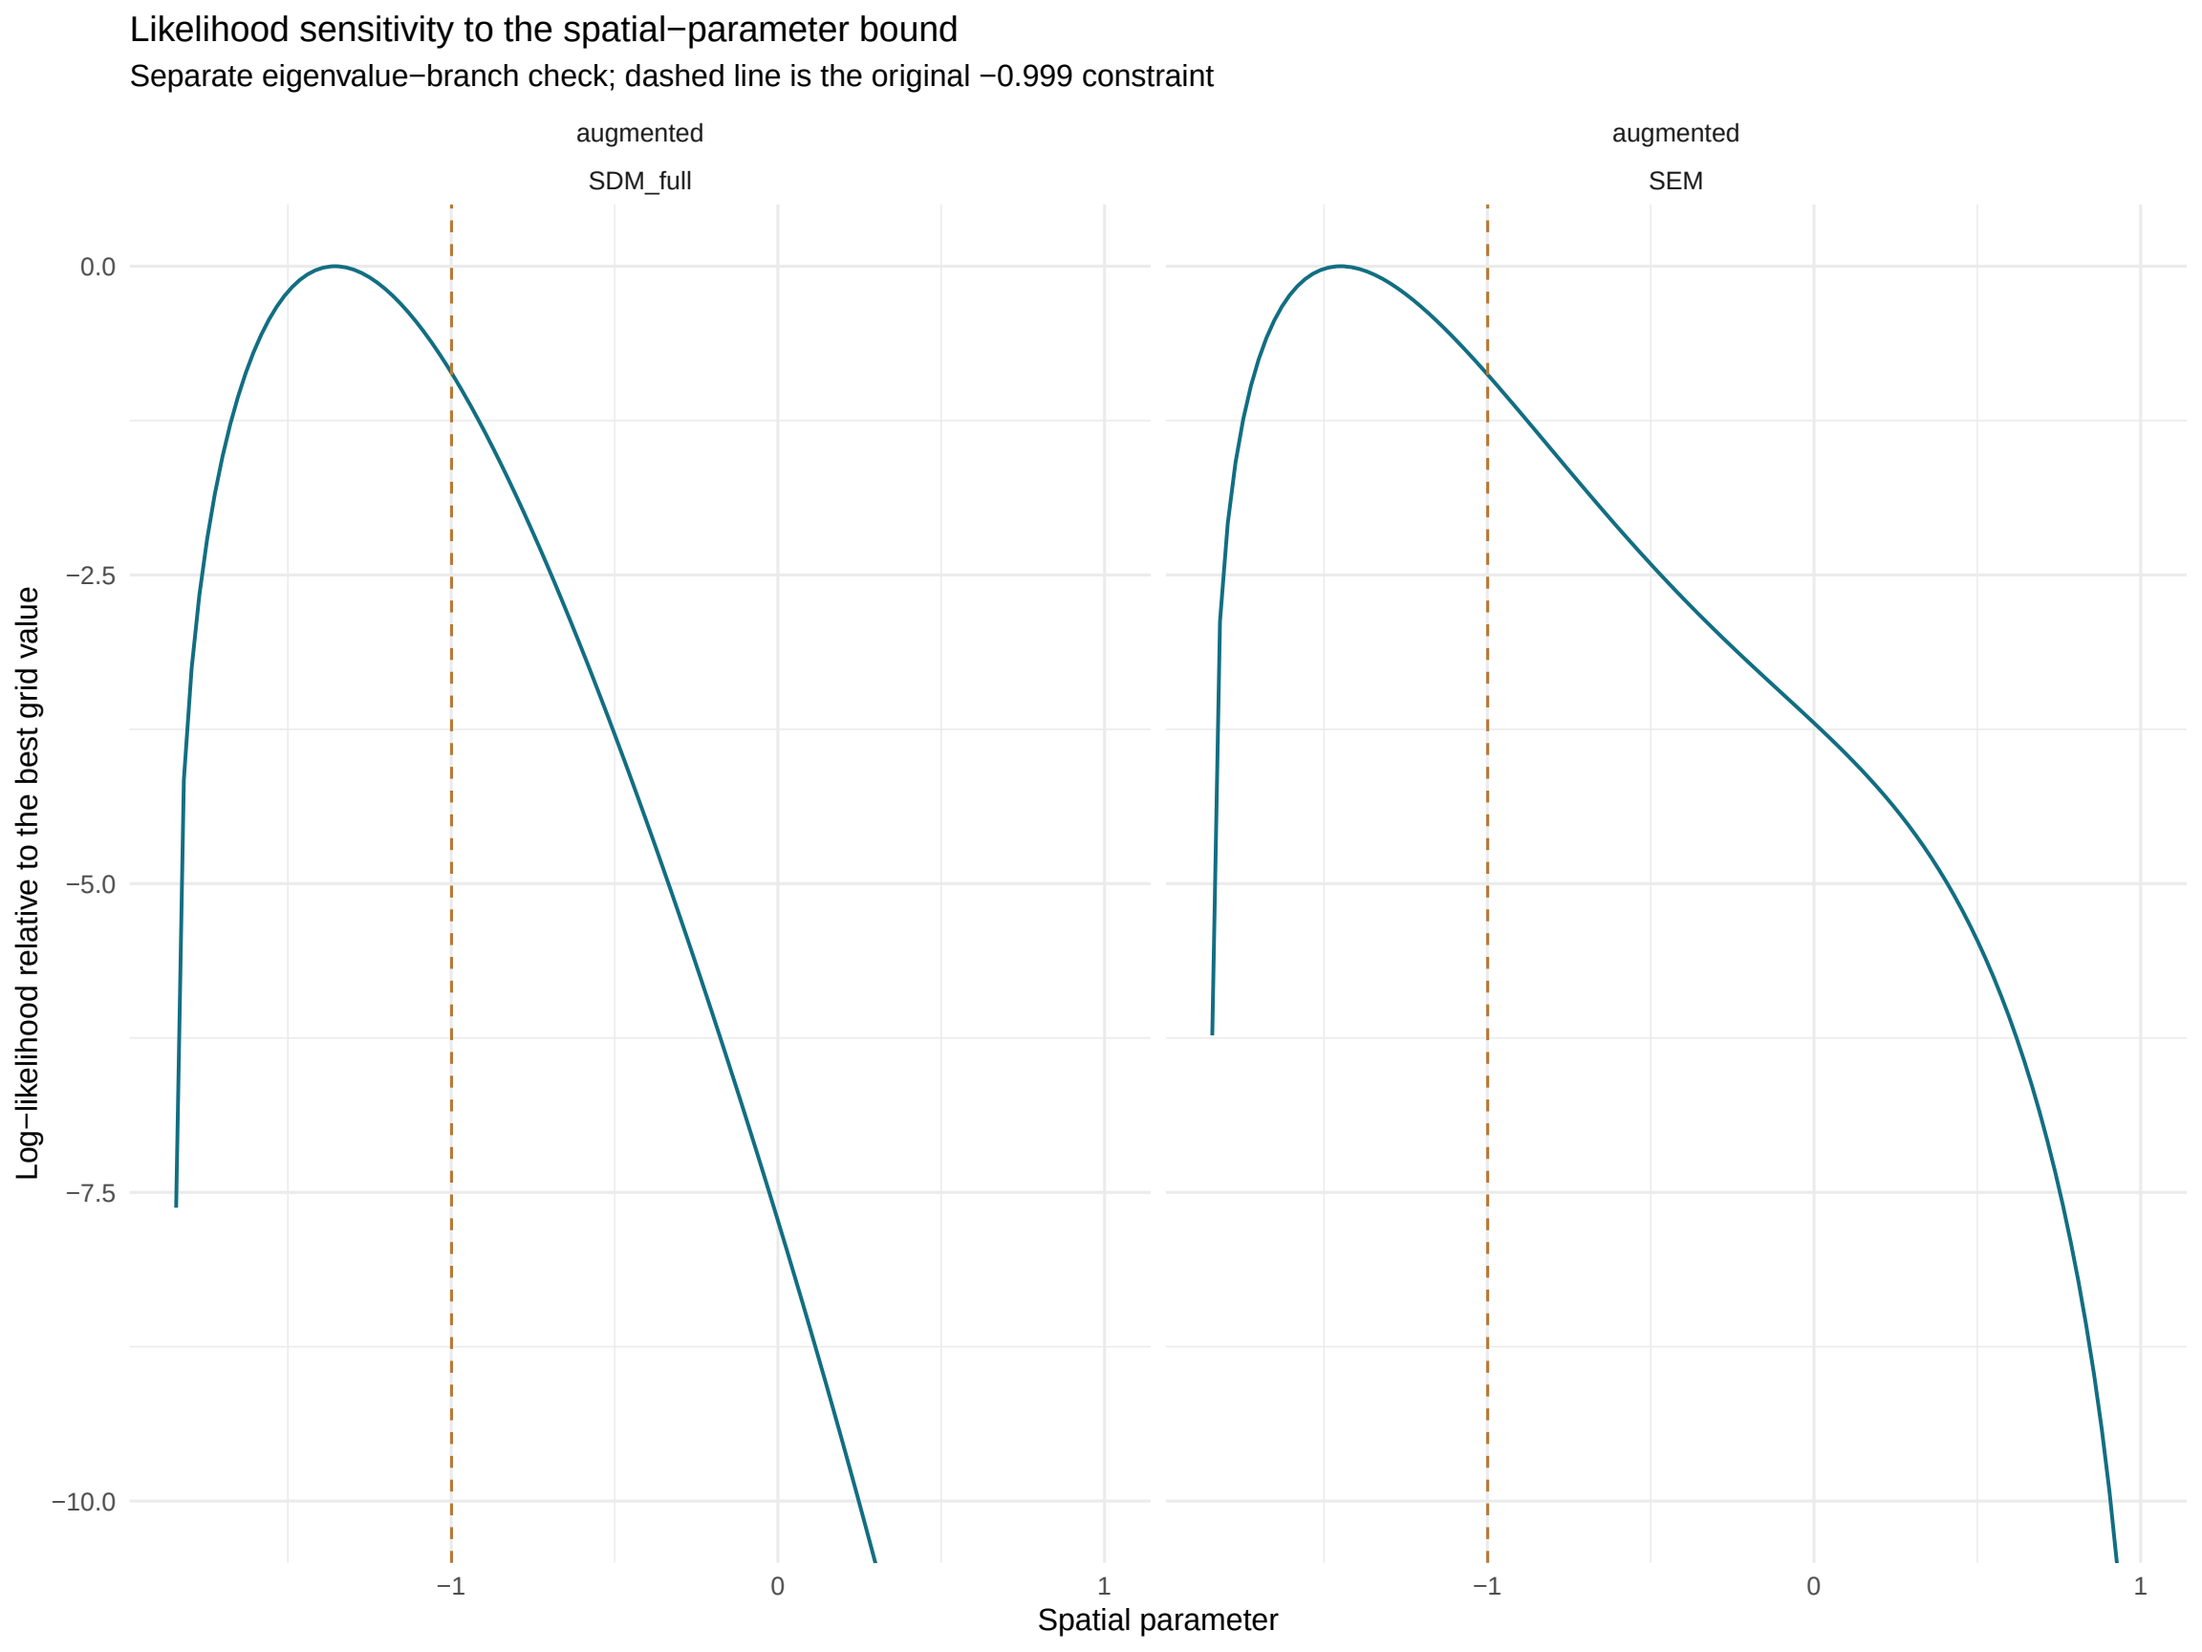

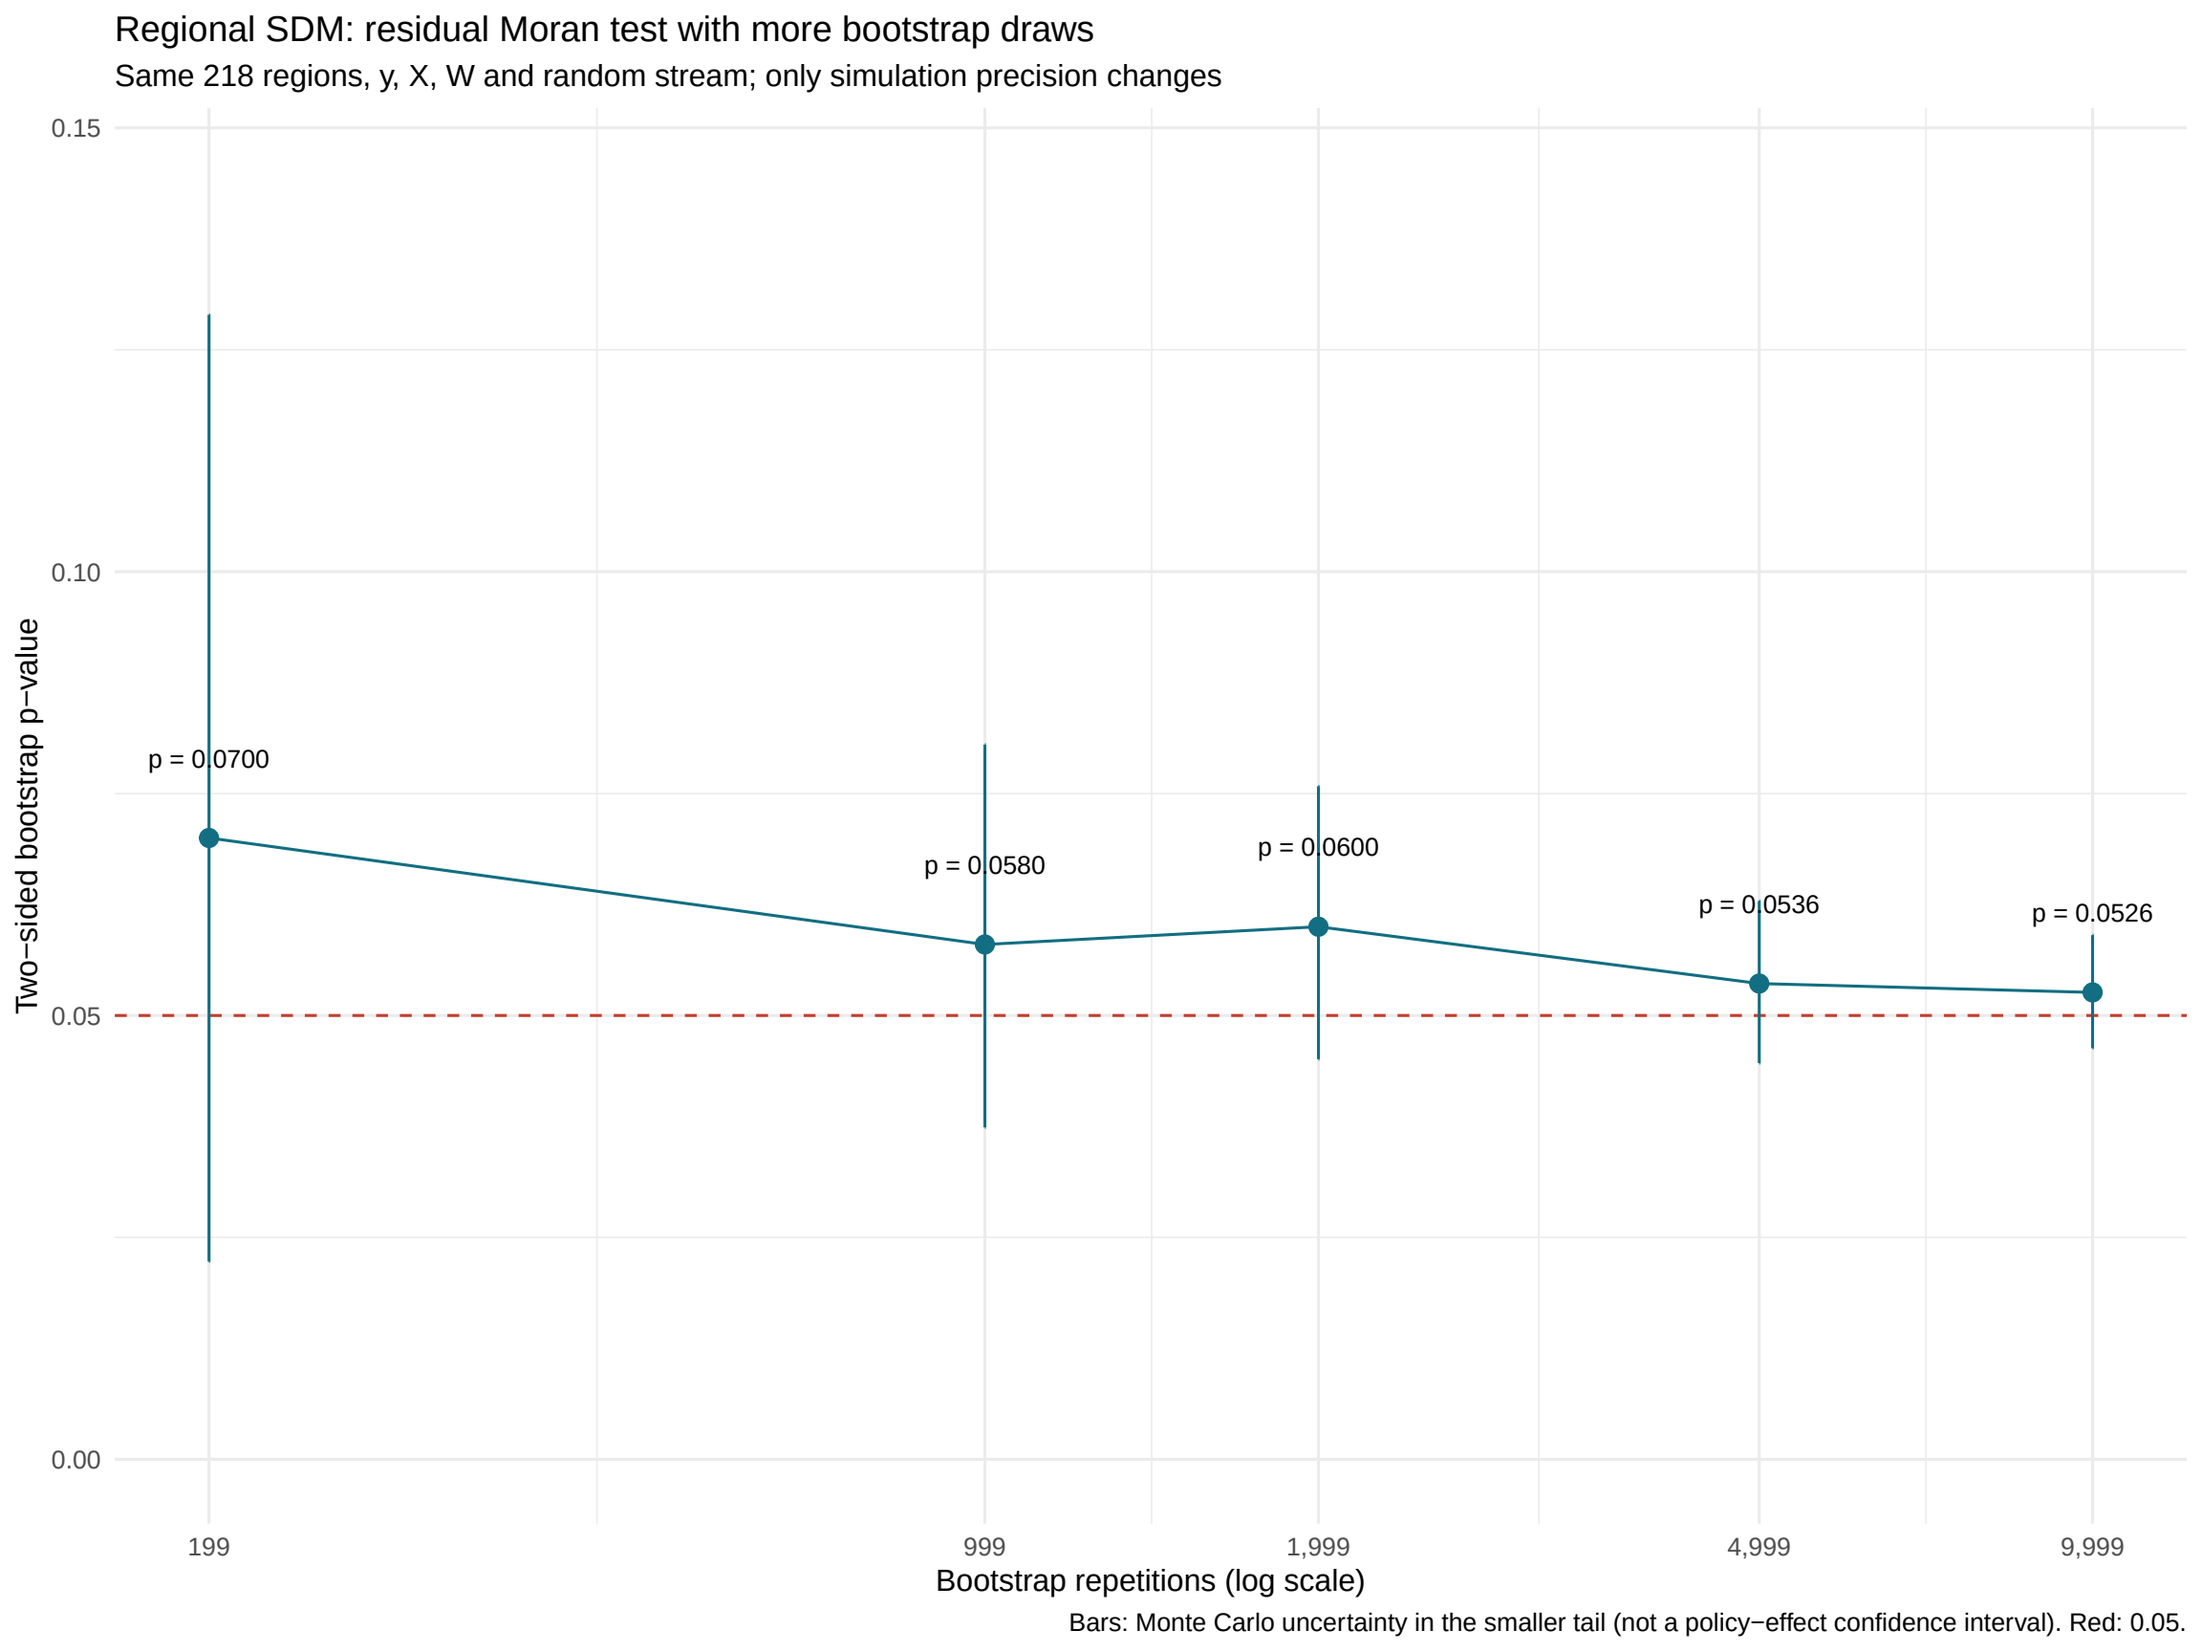

Immigration intensity, ages 15−64 (COMPLET), 2024

asinh(immigration / two−January population mean x 1,000)

General migration, not ICT−worker mobility; grey indicates missing data or non−EU countries.

Likelihood sensitivity to the spatial−parameter bound

Why countries were missing from Figure 7

2024, ages 15−64; the two age definitions are kept separate

COMPLET: age at last birthday

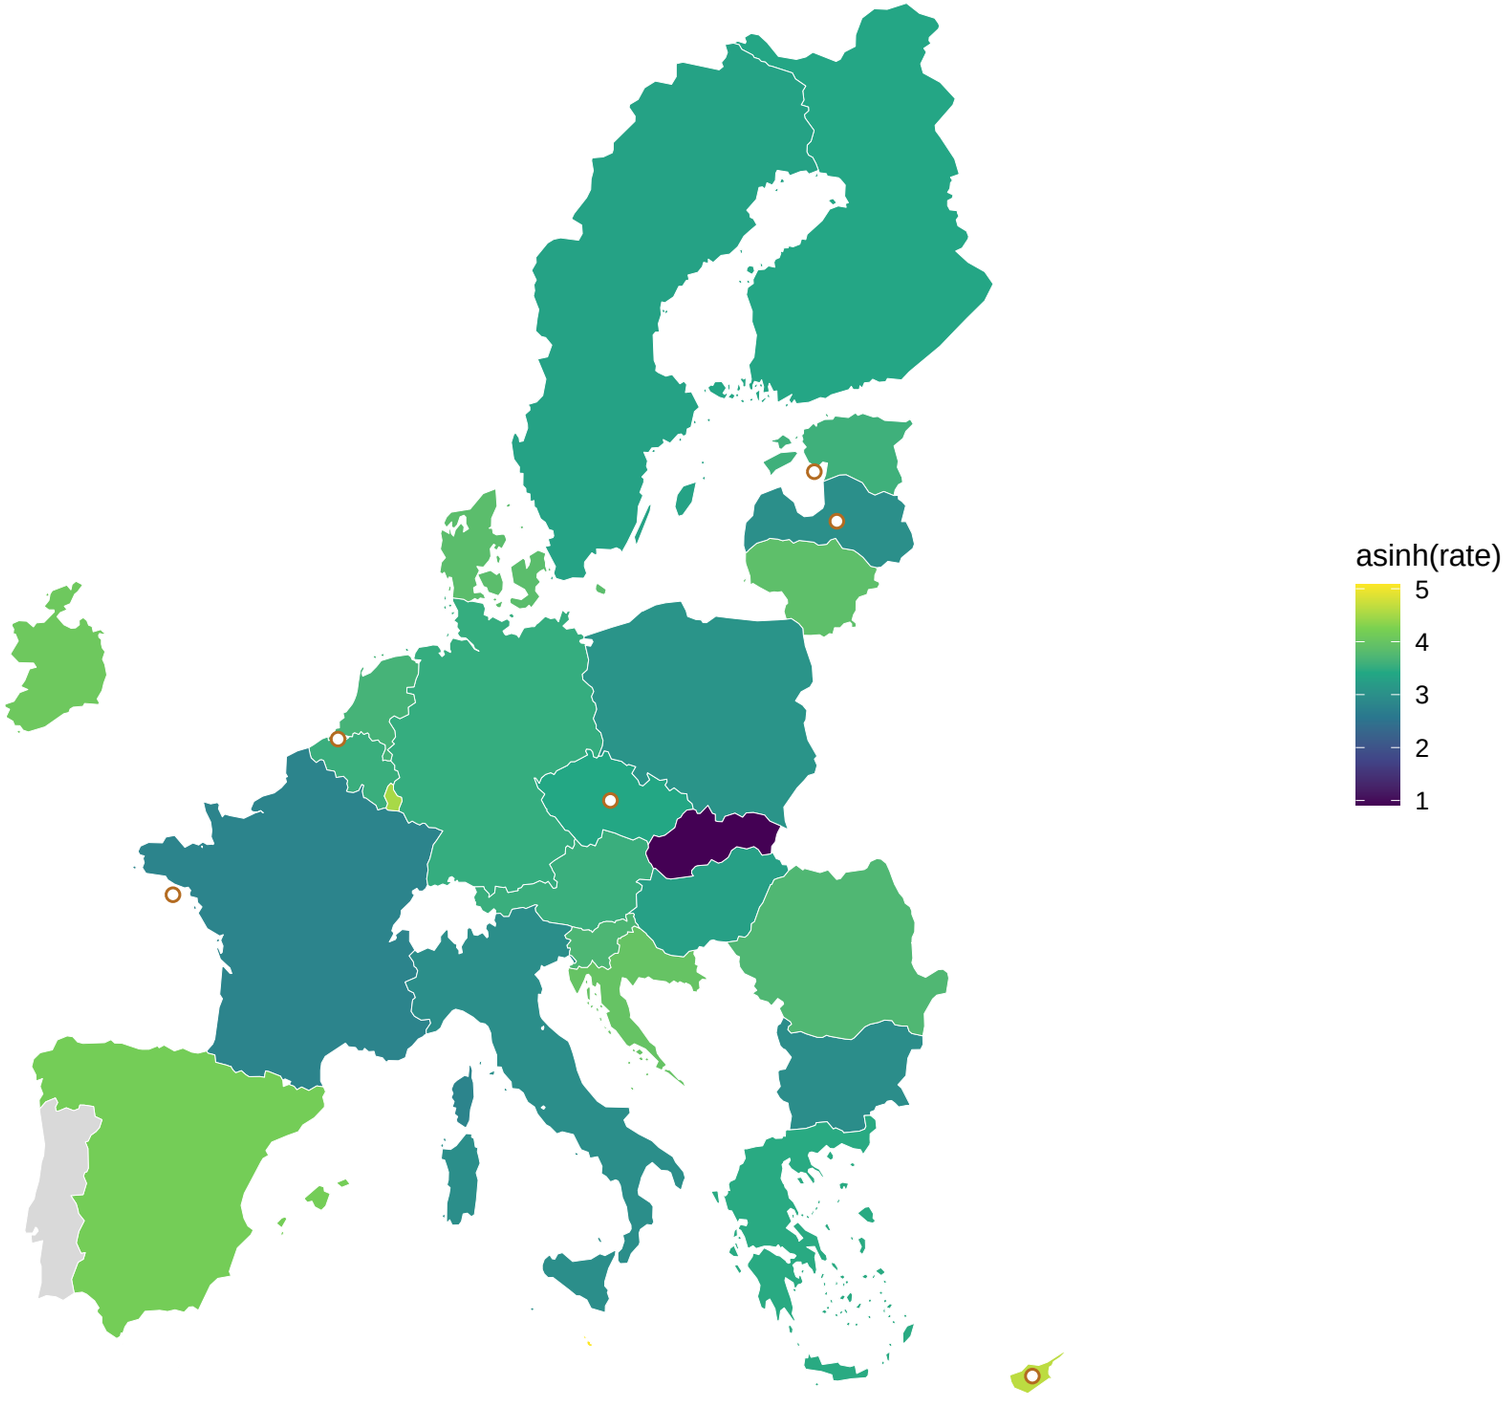

REACH: age reached during year

Rate per 1,000 residents aged 15−64. Grey means unavailable under that definition.

EU coverage supplement: immigration intensity, 2024

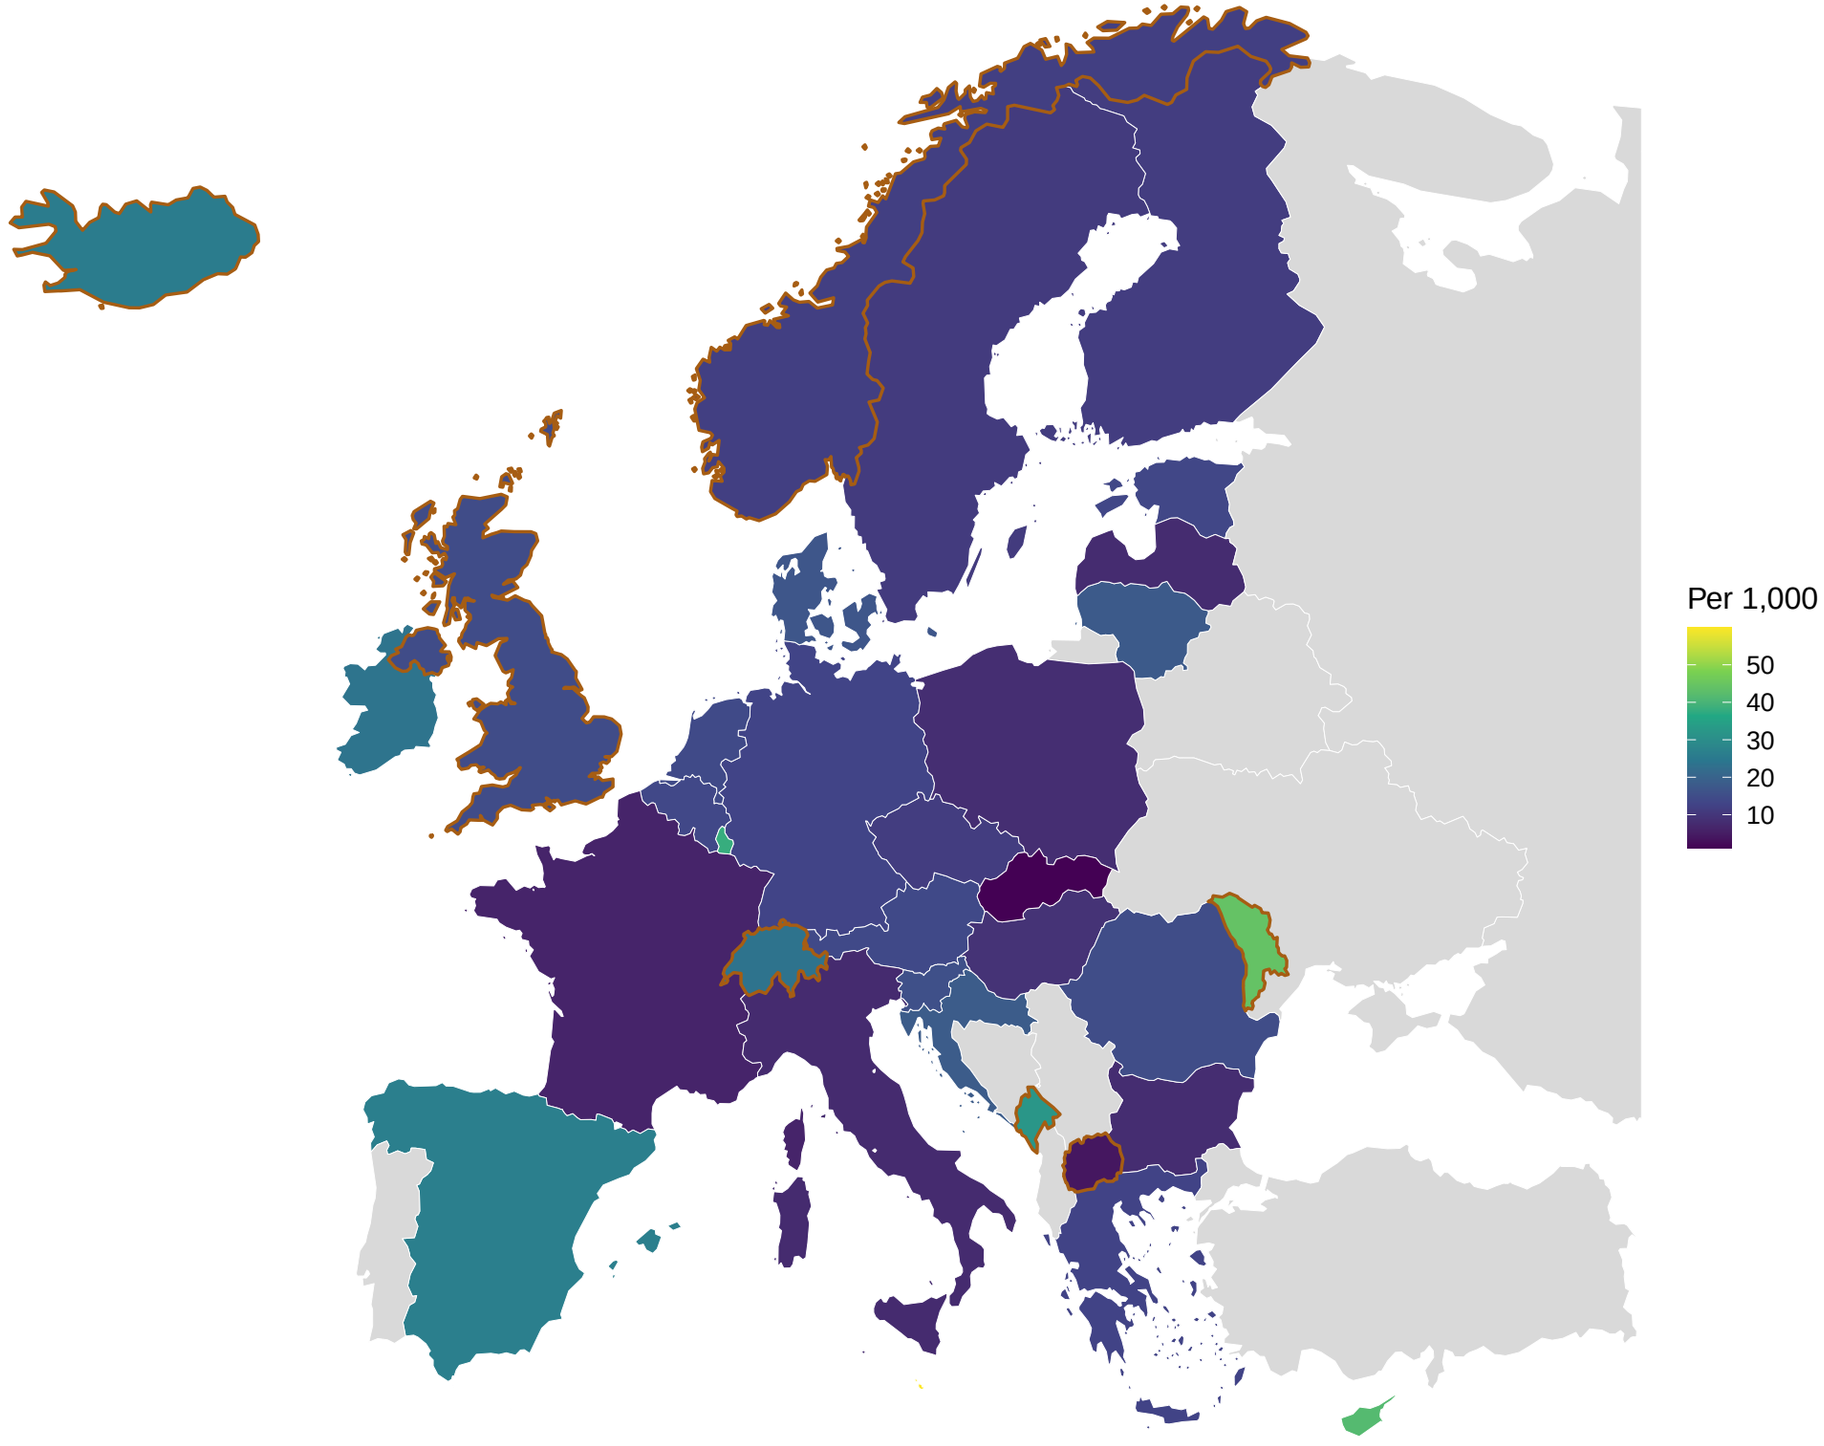

COMPLET where available; REACH fallback is marked by a circle

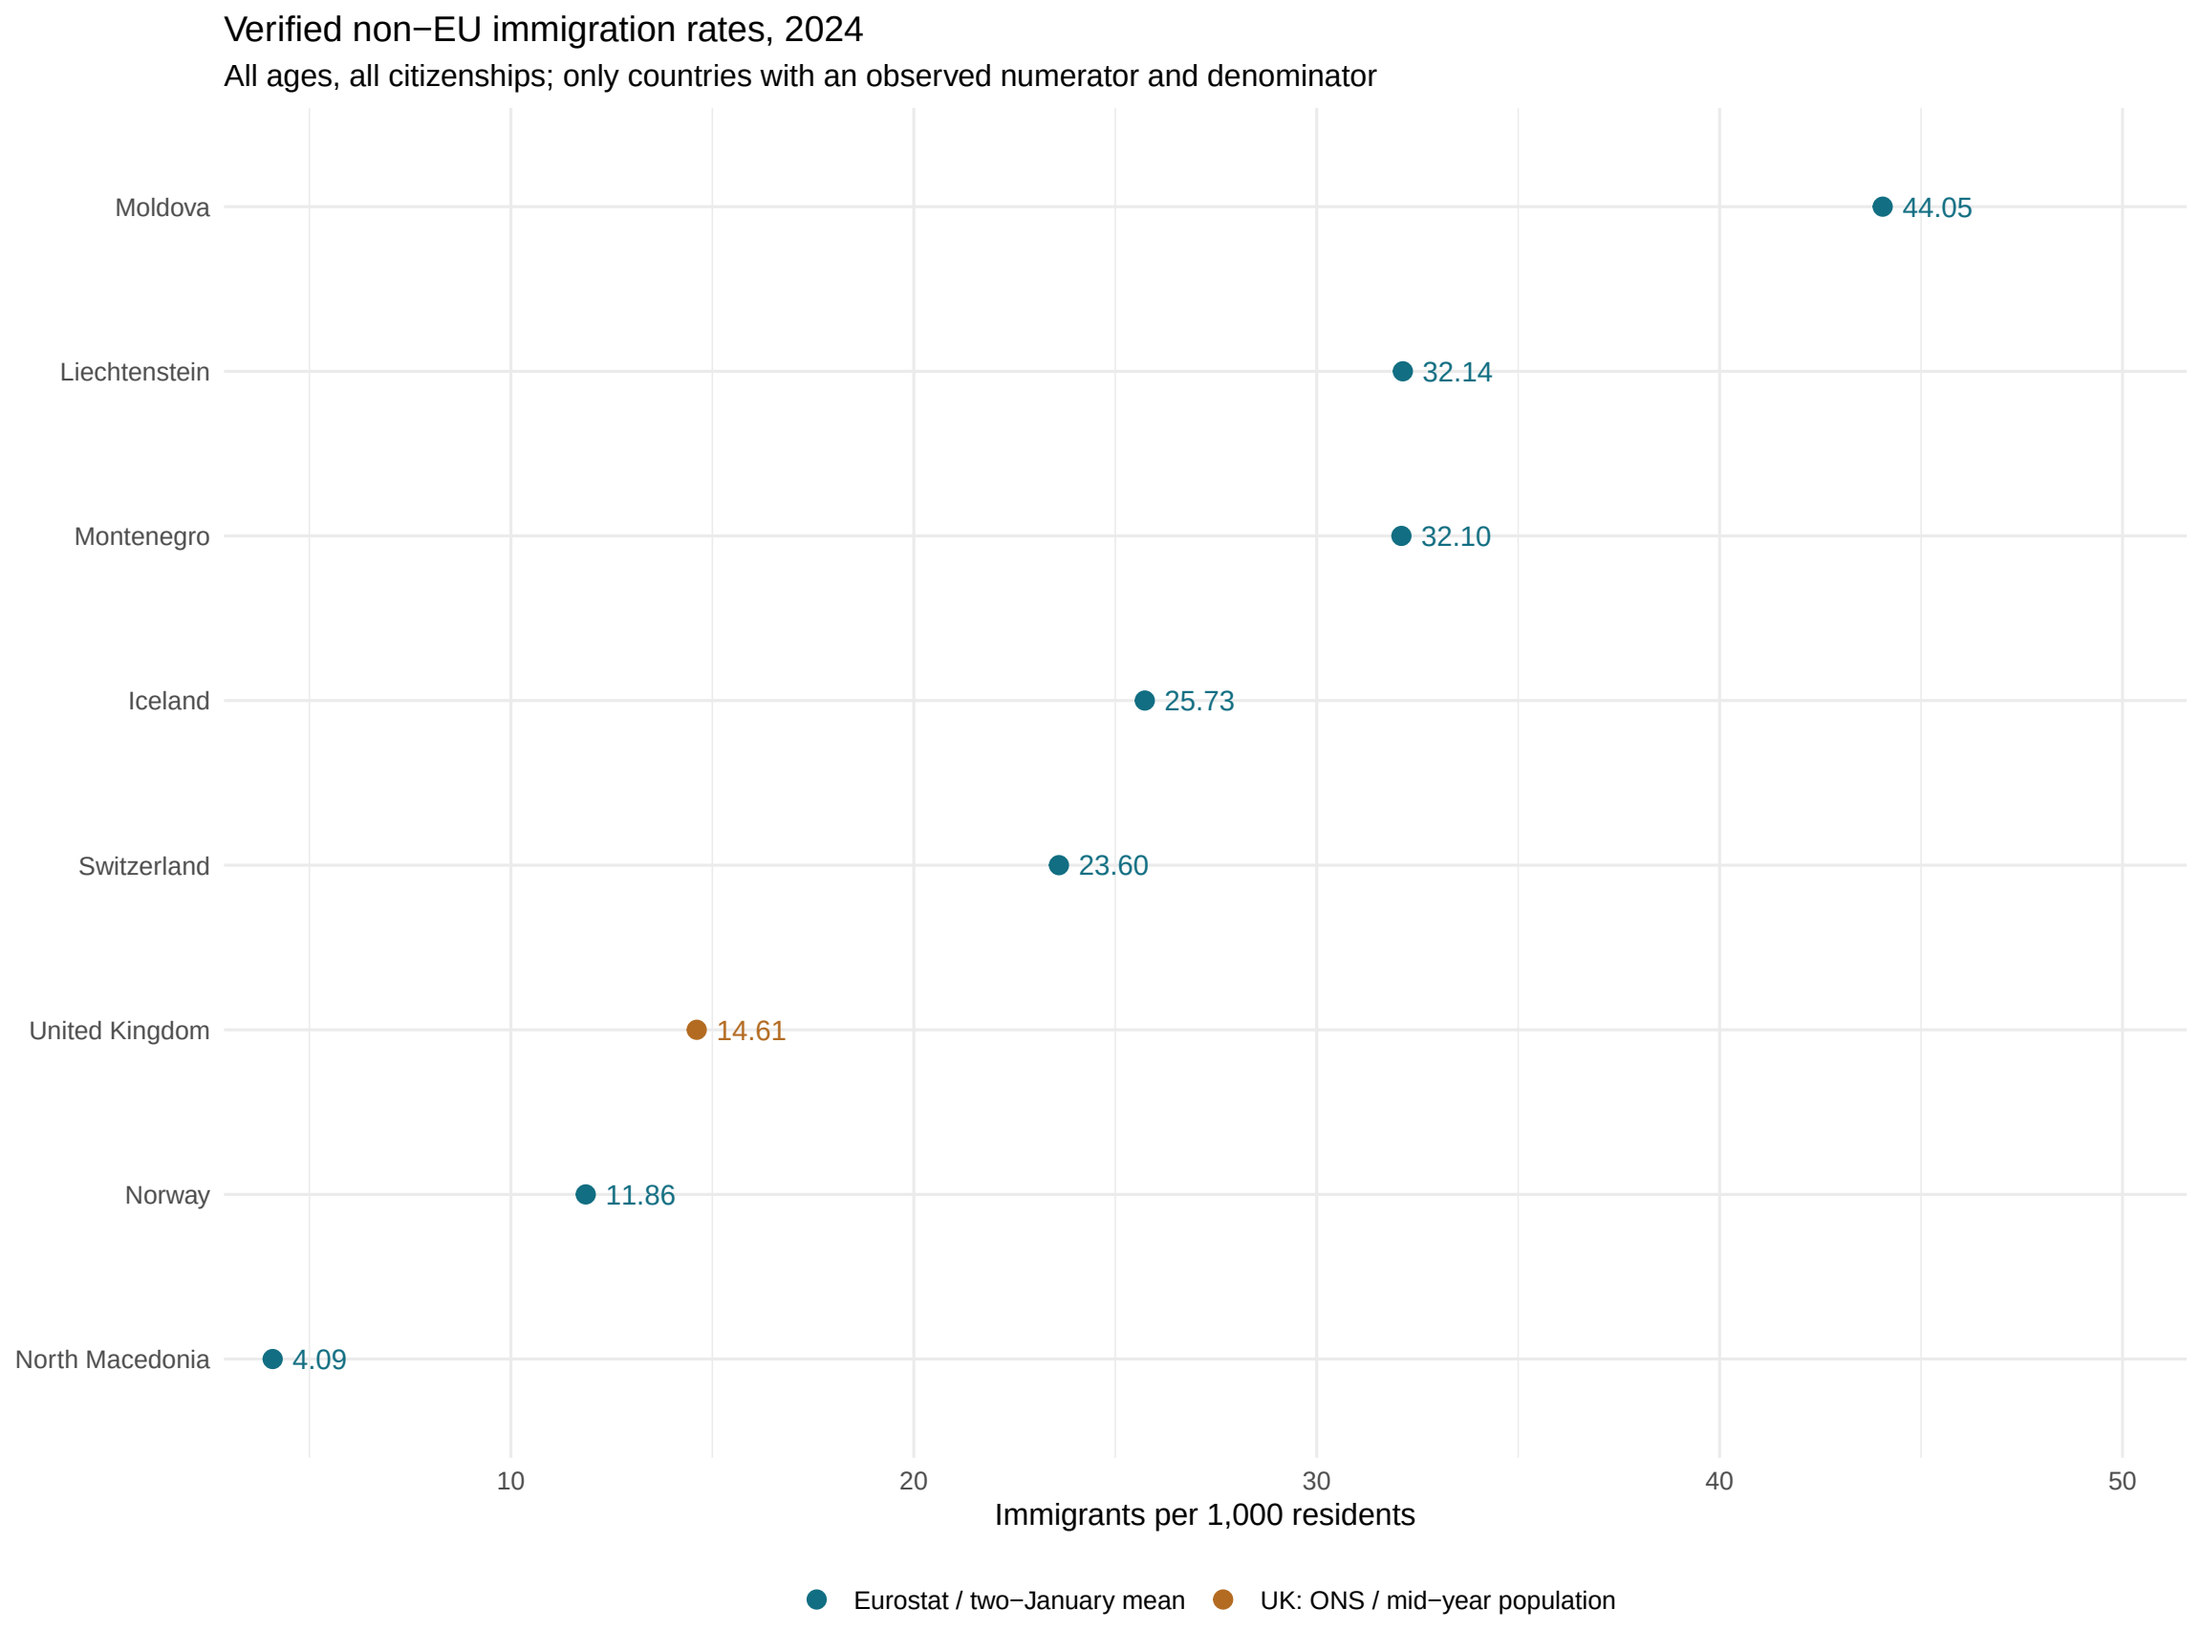

Exploratory mixed−definition map; it does not replace the original COMPLET regression.

Immigration intensity across Europe, including the UK

2024, all ages and all citizenships; orange border = non−EU data

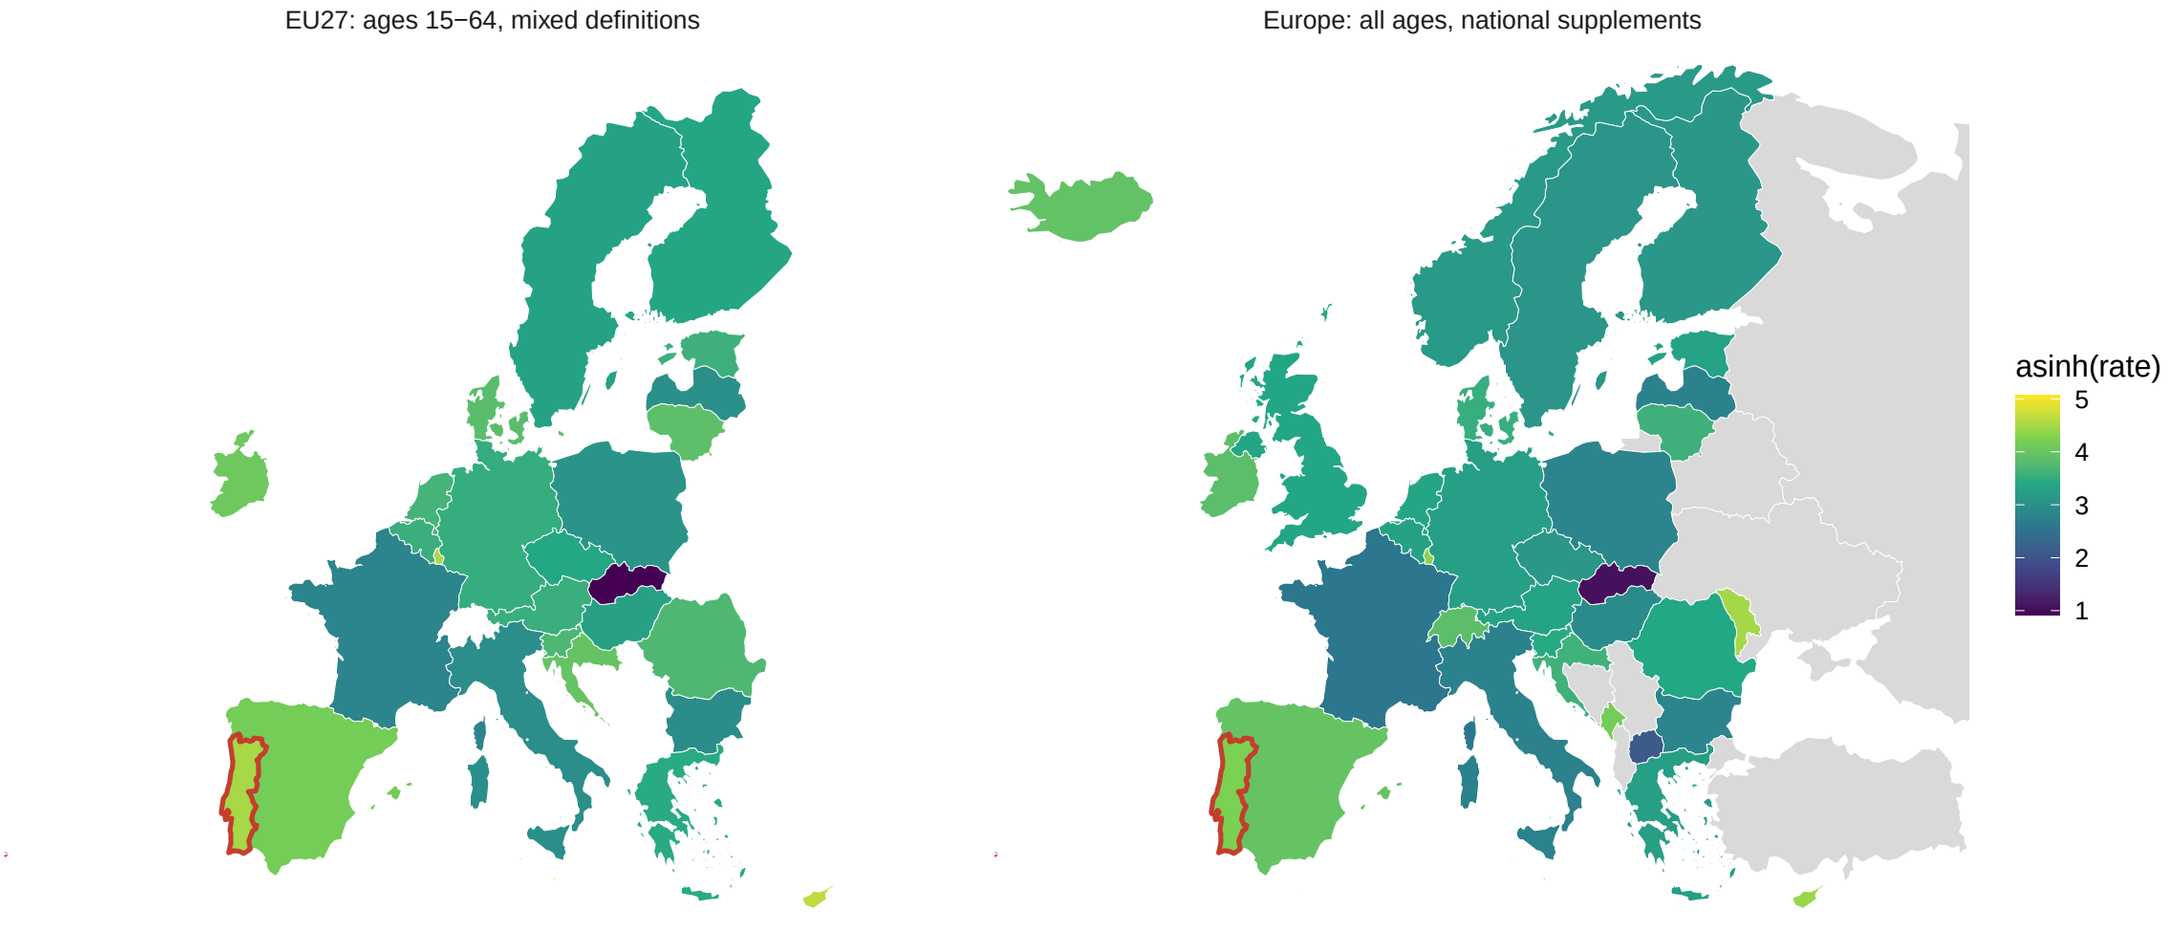

Eurostat two−January population mean; UK uses revised ONS mid−year population. Grey: unavailable.

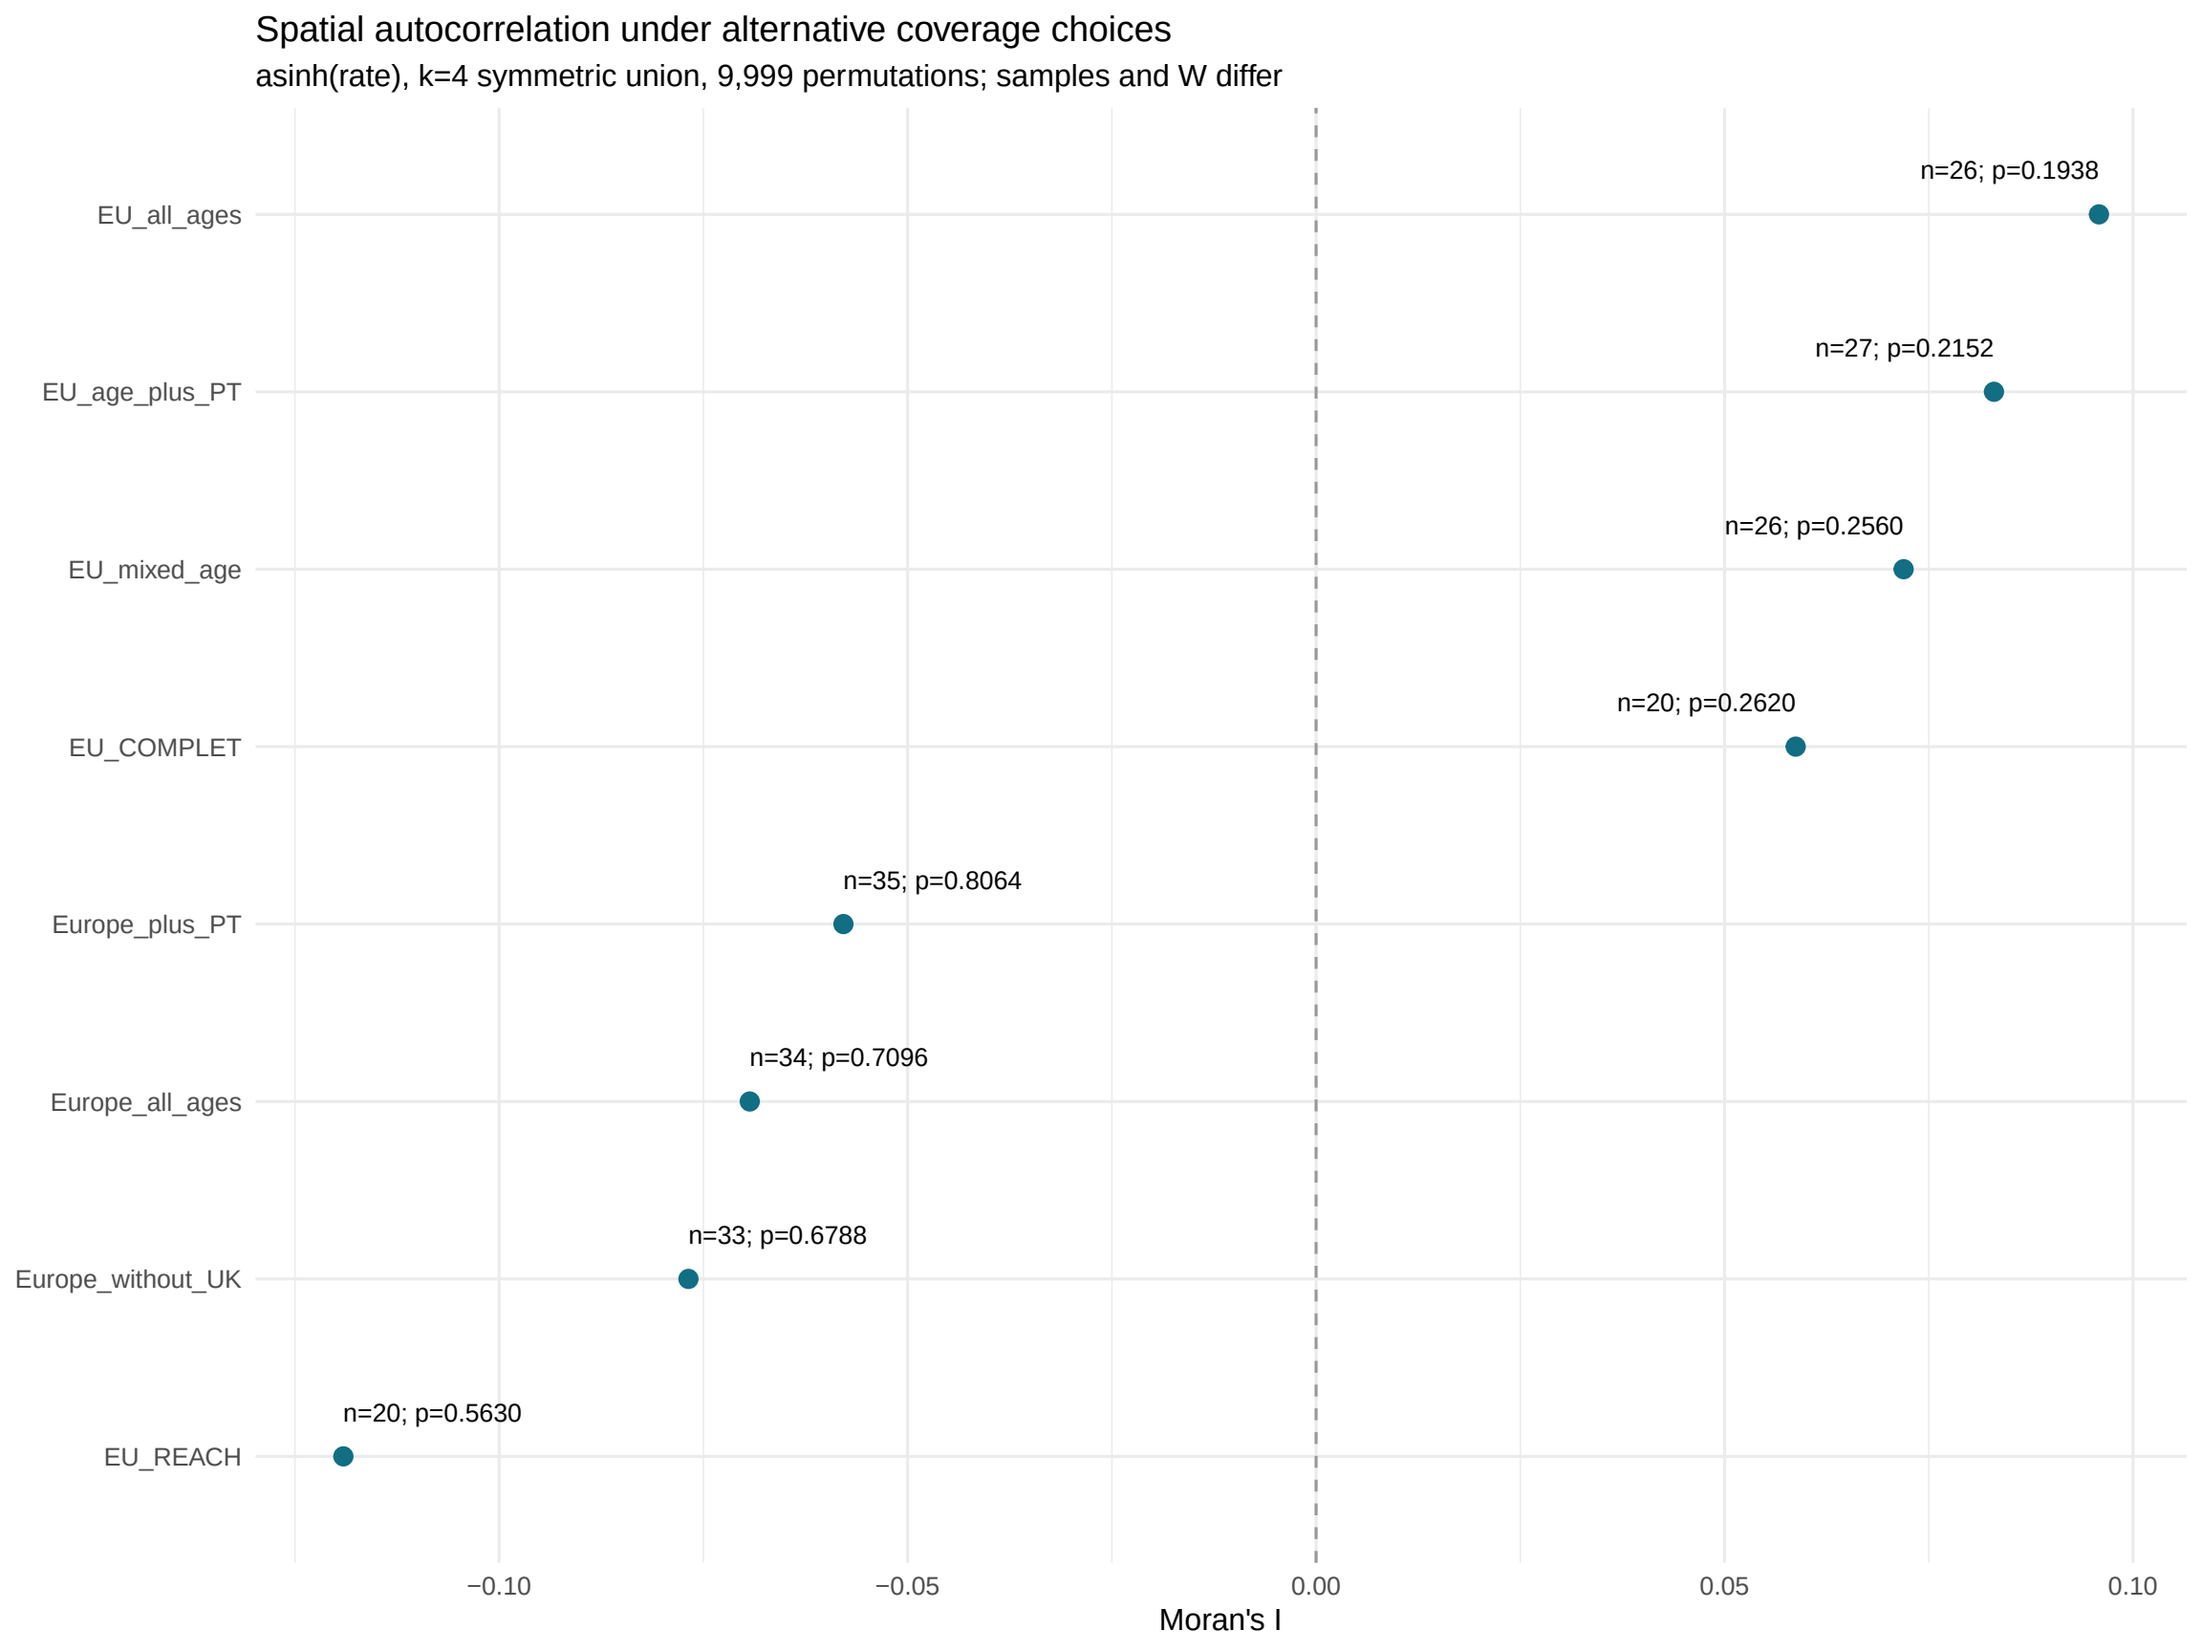

Verified non−EU immigration rates, 2024
